The book cover features a brown background with several white fish silhouettes swimming in various directions. A large red circle is positioned on the right side, containing a stylized black and white fish with intricate patterns. The author's name, 'Yong Zhao', is printed in white text within the red circle.

American Education in the Age of Globalization

A white fish silhouette is located at the bottom right corner of the cover, swimming towards the right.

In the 21st century, countries who out-educate us today will out-compete us tomorrow, and America is already in danger of falling behind.

--Barack Obama

Lady Gaga

In China, students have longer school days and longer school years than their peers in the United States.

China also has more rigorous academic standards, which focus largely on math and science. China's smartest students are pushed through the K-12 system and guaranteed spots in major universities.

That birth-to-college-graduation mentality doesn't exist in America and it needs to change if the United States is going to compete in the 21st century global workforce, U.S. Deputy Secretary of Education Anthony Miller said recently at an education conference in Miami.

"Our education system is in a crisis," Miller said. "It's truly threatening our economic prosperity and that link is getting clearer and clearer each day."

<http://www.news-press.com/article/20111002/NEWS0104/110020363/U-S-surpassed-education-ratings>

China Daily, November 27, 2010

The survey covering 21 countries, conducted by International Educational Progress Evaluation Organization, showed Chinese students excelled at math, beating their peers from other countries. But when it came to using their imagination, they were tied for the last place. And in creativity, they were fifth from the bottom.

The survey results are not shocking, given the way our children are taught in schools and at home. But they are a stern reminder to our educators and parents to change their ways.

The global study should make us swing into action and help our students to throw open their young minds to imagination and creativity. It is time our education officials and educators asked themselves what they should do to let our children's imagination and creativity blossom.

“No uniform textbooks, no standardized tests, no ranking of students, this is American education in the eyes of a Chinese journalist...”

American classrooms don't impart a massive amount of knowledge into their children, but they try every way to draw children's eyes to the boundless ocean of knowledge outside the school; They do not force their children to memorize all the formulae and theorems, but they work tirelessly to teach children how to think and ways to seek answer to new questions; They never rank students according to test scores, but they try every way to affirm children's efforts, praise their thoughts, and protect and encourage children's desire and effort.”

Gao Gang, Encountering American Education, #2 most popular item in the category of reportage in China 2003.

U.S. tops the world in school spending but not test scores

WASHINGTON (AP) — The United States spends more public and private money on education than other major countries, but its performance doesn't measure up in areas ranging from high-school graduation rates to test scores in math, reading and science, a new report shows.

USA Today 9/6/2003

http://www.usatoday.com/news/education/2003-09-16-education-comparison_x.htm

In Classroom of Future, Stagnant Scores

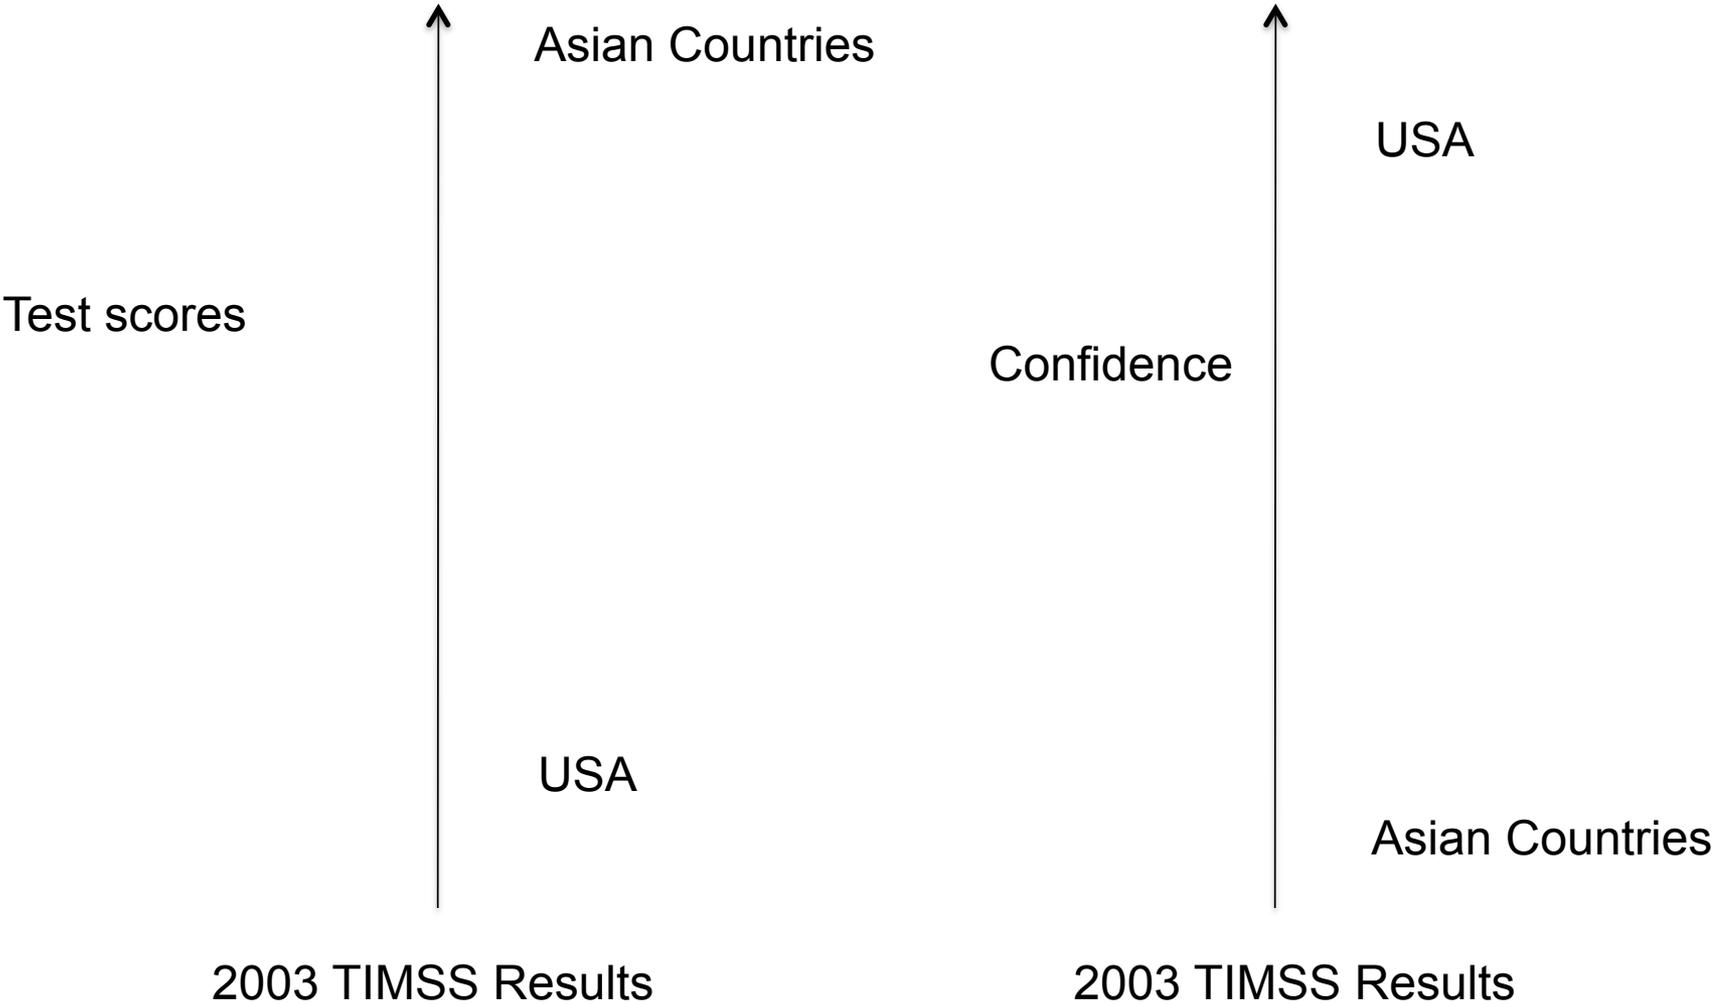

In a nutshell: schools are spending billions on technology, even as they cut budgets and lay off teachers, with little proof that this approach is improving basic learning.

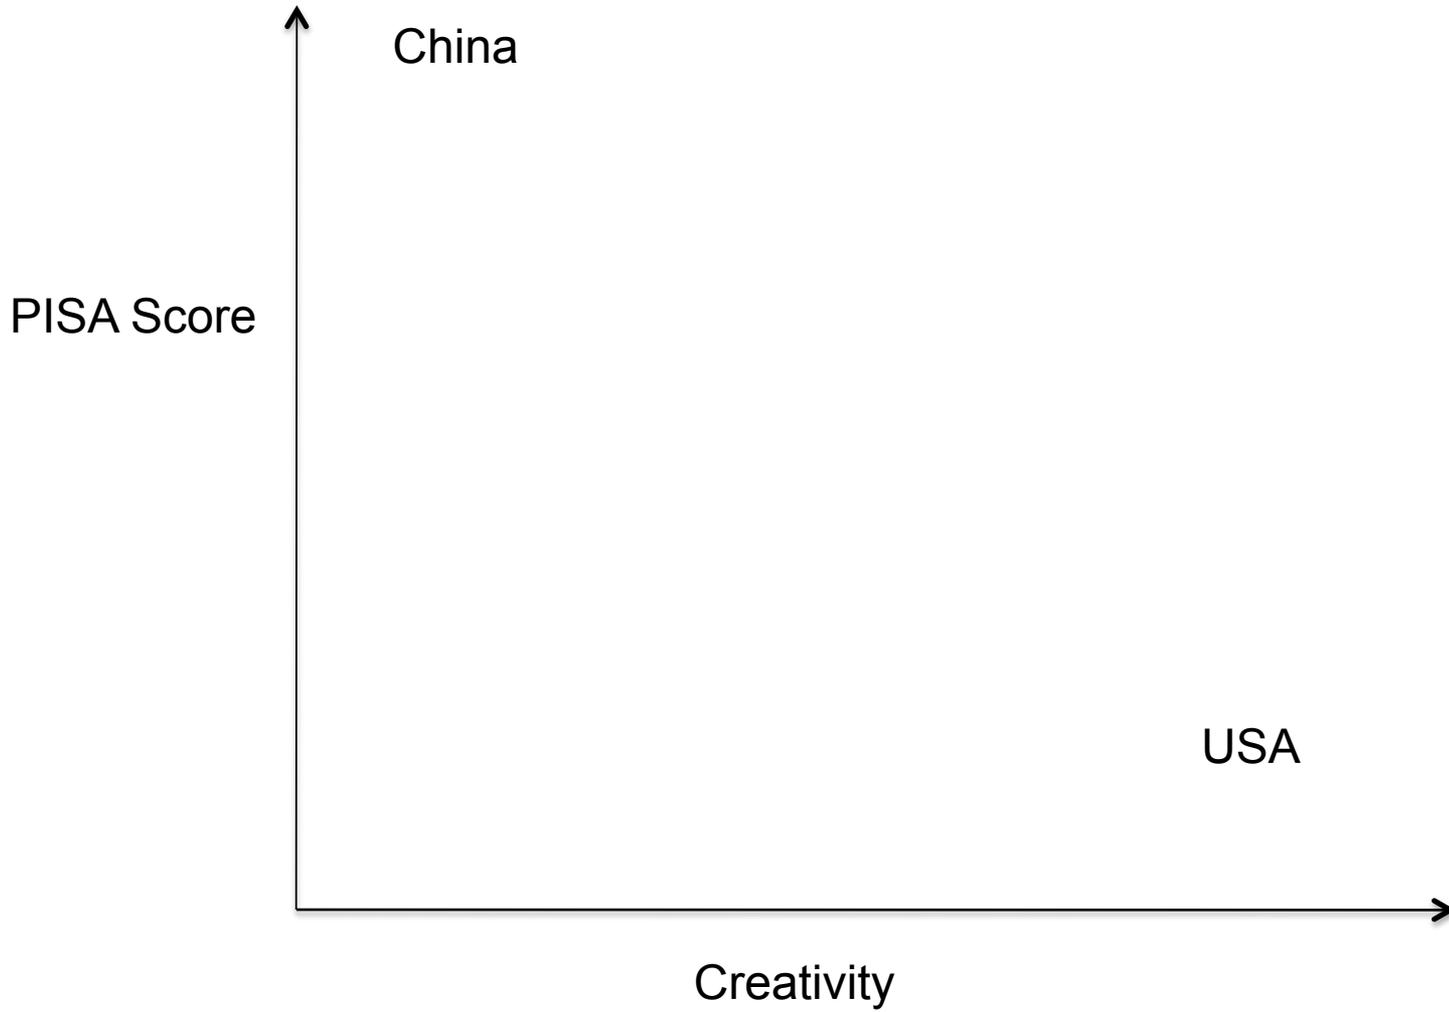

New York Times, 9/4/2011

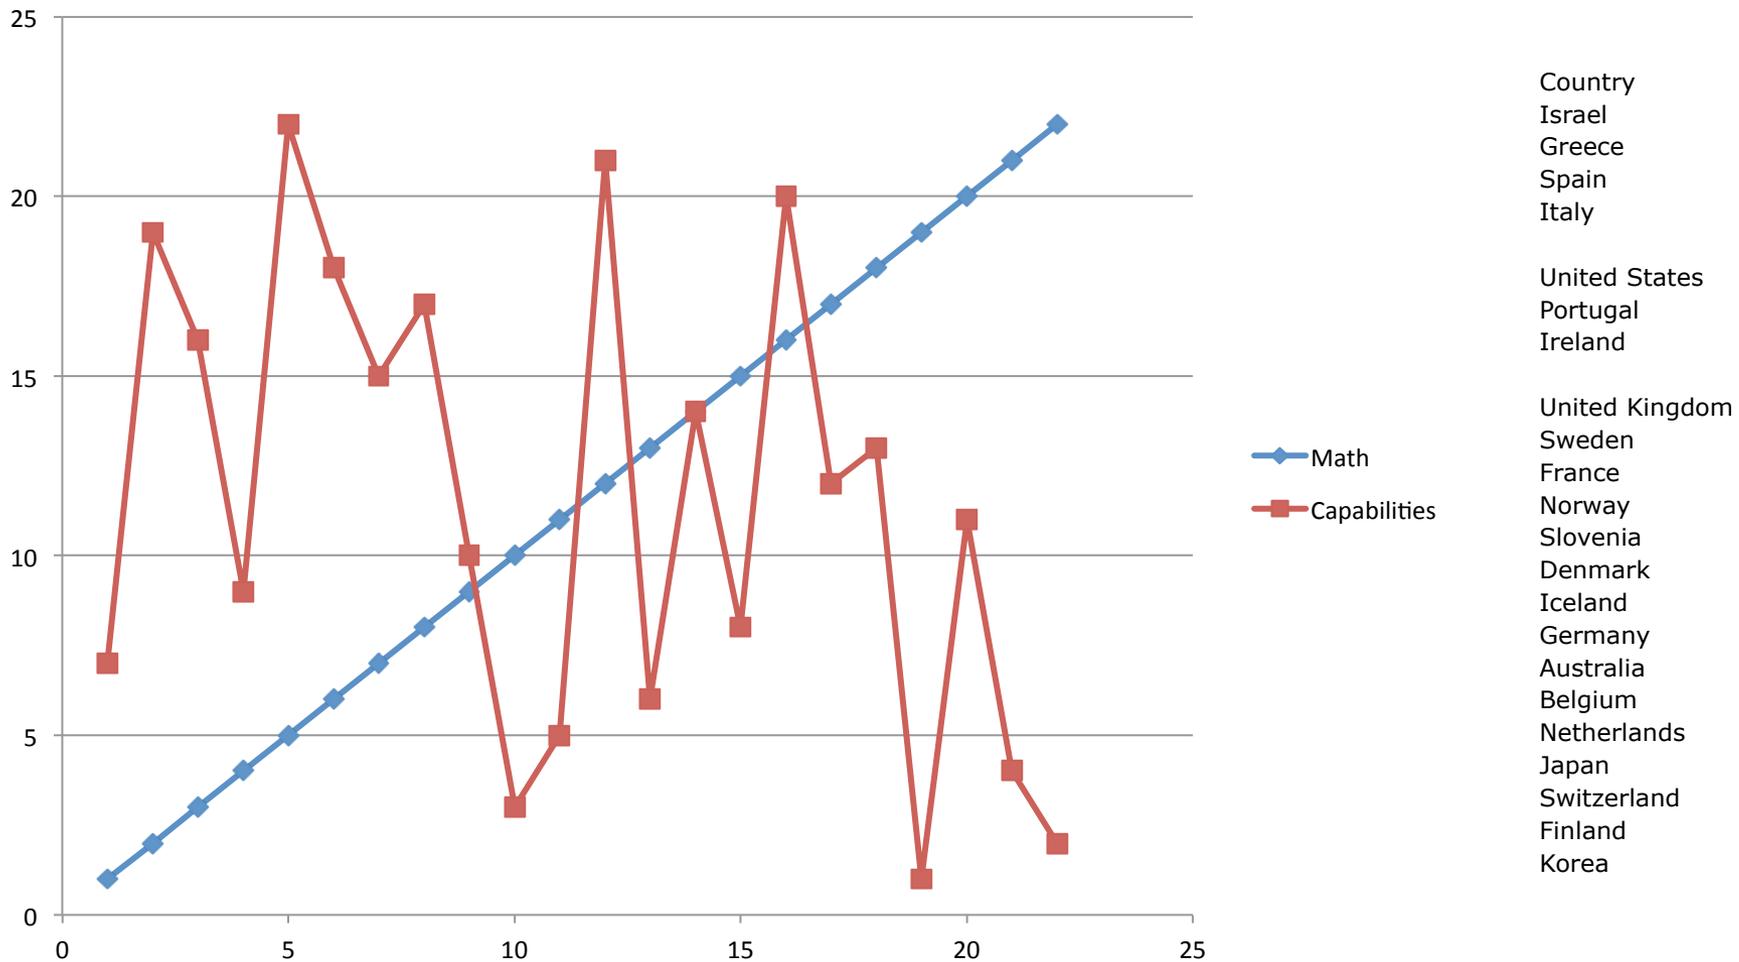

<http://www.nytimes.com/2011/09/04/technology/technology-in-schools-faces-questions-on-value.html?pagewanted=all>

It is a miracle that curiosity survives formal education.
---Albert Einstein

Side Effects?

Costs of high scores:

When test scores go up, we should worry, because of how poor a measure they are of what matters, and what you typically sacrifice in a desperate effort to raise scores.

--Alfie Kohn

All this energy has been spent on raising test scores, not nurturing creativity or any other aspect of human nature.

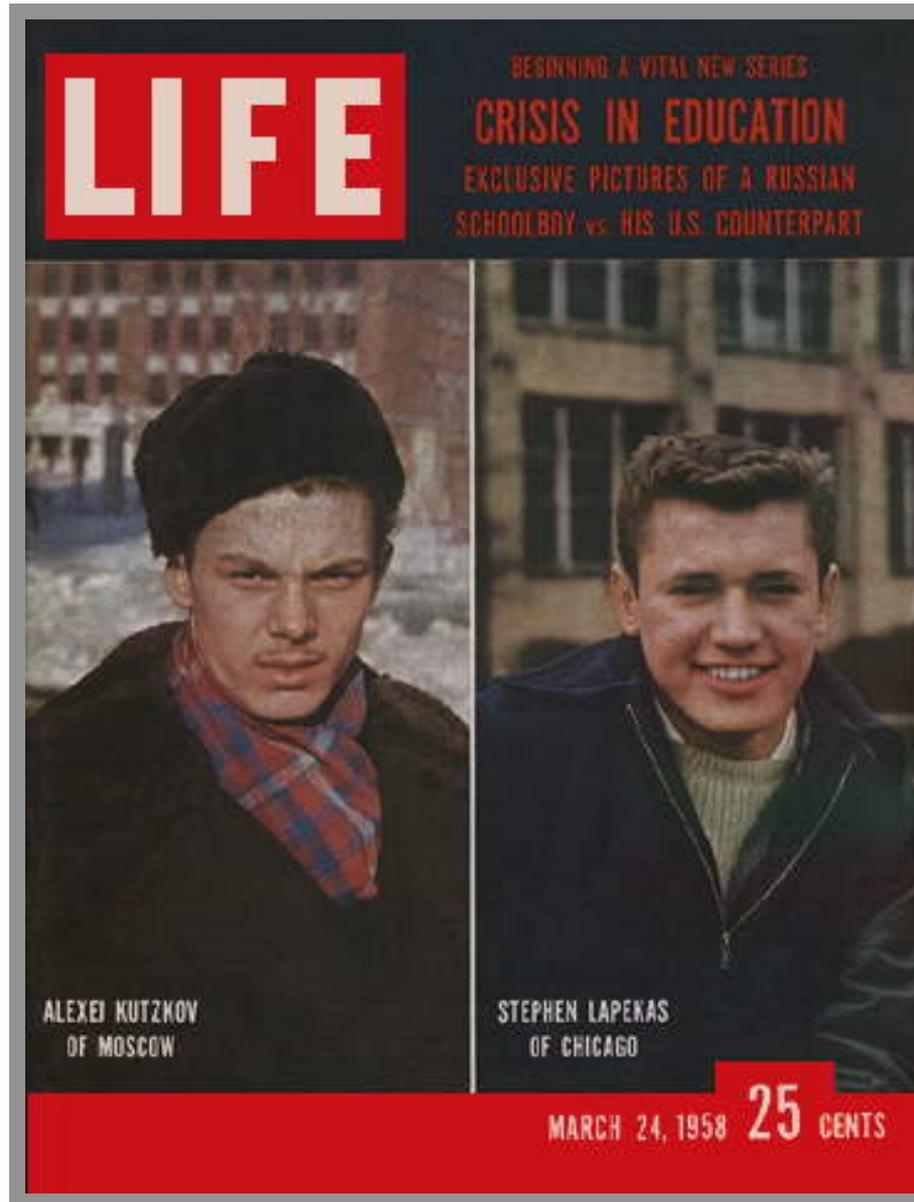

--Lee Ju Ho, Minister of Education, Science, and
Technology
Jan 28, 2011, Chronicle of Higher Education

The story of bad test takers: USA

Alexei vs Stephen: Curriculum and Time

Inside photos showed Alexei doing complicated experiments in physics and chemistry and reading aloud from *Sister Carrie*.

1958

Stephen, by contrast, retreated from a geometry problem on the blackboard and the caption advised, "Stephen amused class with wisecracks about his ineptitude." Seated at a typewriter in typing class, Stephen tells us "I type about one word a minute."

Our Nation is at risk. Our once unchallenged preeminence in commerce, industry, science, and technological innovation is being overtaken by competitors throughout the world.

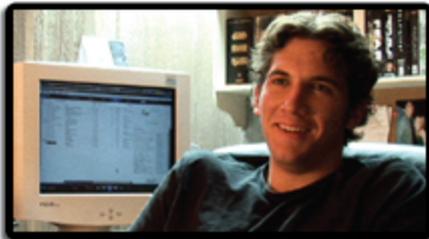

the educational foundations of our society are presently being eroded by a rising tide of mediocrity that threatens our very future as a Nation and a people.

We are raising a new generation of Americans that is scientifically and technologically illiterate.

A Long History of Bad Test-takers

- 1960s
 - FIMS: 12th out of 12 countries
 - FISS: 14th out of 18 countries
- 1970s/1980s
 - SIMS: 12, 14, 12, 12 out of 15 (number systems, algebra, geometry, calculus)
 - SISS: 14th (biology), 12th (chemistry), 10th (physics) out of 14
- 1990s—2007: TIMSS (8th graders)
 - 28th out of 42 in 1995
 - 15th in 2003
 - 9th in 2007

...America still has the largest, most prosperous economy in the world. (Applause.) No workers -- no workers are more productive than ours. No country has more successful companies, or grants more patents to inventors and entrepreneurs. We're the home to the world's best colleges and universities, where more students come to study than any place on Earth.

--President Obama, 2011 State of the Union Address

Achievement Gaps

The First International Mathematics Study (FIMS)

- Year data collected: 1964
- Target Population: 13 year olds
- Participating Countries: Australia, Belgium, England, Finland, France, Germany (FRG), Israel, Japan, Netherlands, Scotland, Sweden, United States.
- US finished second to last (Sweden)

Jefferson told us where to look to see if a nation is a success.

He did not say to look at test scores.

Instead, he said to look at “life, liberty, and the pursuit of happiness.”

--Keith Baker (2007)

40 years later: Wealth

FIMS scores in 1964 correlate at $r = -0.48$ with 2002 PPP-GDP. In short, the higher a nation's test score 40 years ago, the worse its economic performance on this measure of national wealth.

40 years later: Rate of Growth

The nations that scored better than the U.S. in 1964 had an average economic growth rate for the decade 1992-2002 of 2.5%; the growth rate for the U.S. during that decade was 3.3%. The average economic growth rate for the decade 1992-2002 correlates with FIMS at $r = -0.24$.

Like the generation of wealth, **the rate of economic growth for nations improved as test scores dropped.**

40 years later: Productivity

There is no relationship between FIMS scores and hourly output, $r = -.03$. In 2004, the average hourly output of those nations that outscored the U.S. in 1964 was 3.4% lower than U.S. productivity, though the three nations with higher hourly output all had higher test scores than the U.S.

40 years later: Quality of Life

The average rank on the Quality of Life Index for nations that scored above the U.S. on FIMS was 10.8. The U.S. ranked seventh (lower numbers are better). **FIMS scores correlated with Quality of Life at $r = -0.57$.**

40 years later: Democracy

On the Economy Intelligence Unit's Index of Democracy, those nations that scored below the median on FIMS have a higher average rank on achieving democracy (9.8) than do the nations that scored above the median (18). Once again, the U.S. scored higher on attaining democracy than did nations with higher 1964 test scores.

40 years later: Livability

An alternative to the Quality of Life Index, the Most Livable Countries Index, shows that **six of the nine countries that scored higher on FIMS than the U.S. are worse places to live.** Livability correlates with FIMS scores at $r = -.49$.

40 years later: Creativity

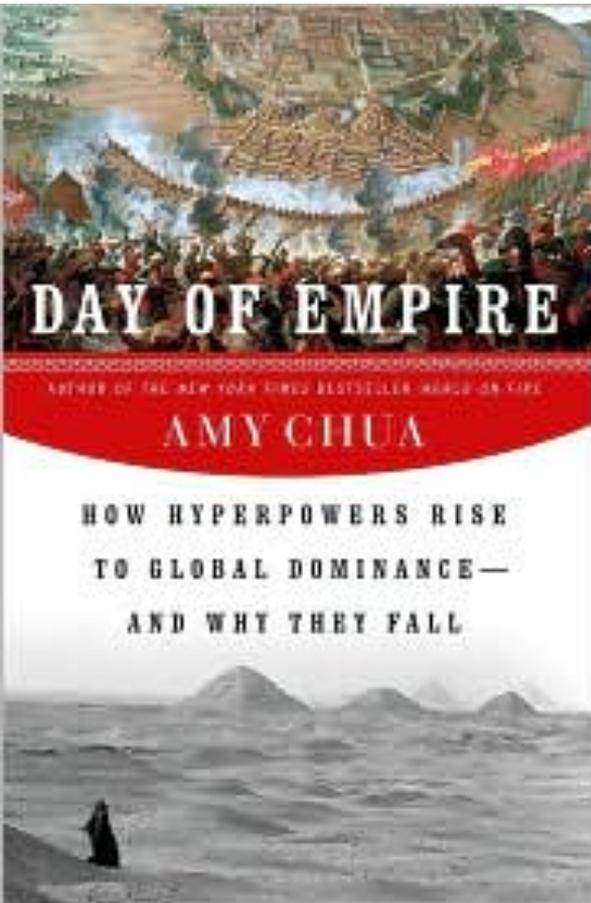

The number of patents issued in 2004 is one indicator of how creative the generation of students tested in 1964 turned out to be. **The average number of patents per million people for the nations with FIMS scores higher than the U.S. is 127. America clobbered the world on creativity, with 326 patents per million people.** However, FIMS scores do correlate with the number of patents issued: $r = .13$ with the U.S. and $r = .49$ without the U.S.

Baker, Keith (2007).Are International Tests Worth Anything?
Kappan, October, 2007

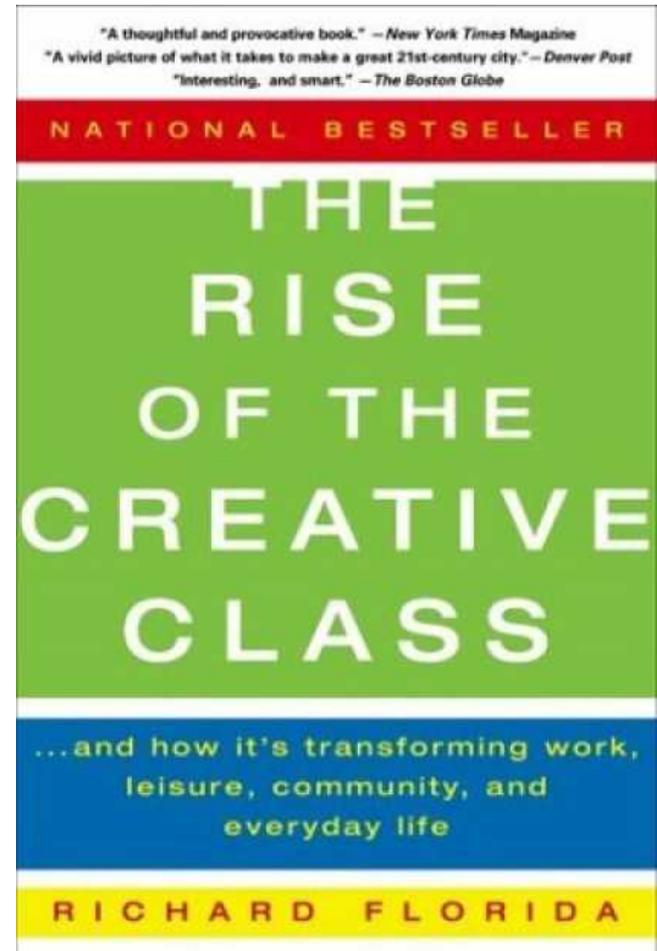

One of psychology's open secrets is the relative inability of grades, IQ, or SAT scores, despite their popular mystique, to predict unerringly who will succeed in life. . . At best, IQ contributes about 20 percent to the factors that determine life success, which leaves 80 percent to other forces.

---Daniel Goleman *Emotional Intelligence: Why It Can Matter More Than IQ*

What Matters?

Diversity of talents
Creativity
Entrepreneurship
Passion

The Traditional Strengths of American Education

- Philosophical strengths
 - School Talent Shows: Broad definition of education
 - Children are like pop-corn: Individual differences
- Structural strengths
 - Local control
 - Professional autonomy
- Resource strengths
 - Public libraries, museums, galleries, etc.
 - Technology, arts and sports facilities, musical instruments

In countries where schools have greater autonomy over what is taught and how students are assessed, students tend to perform better.

In countries where schools account for their results by posting achievement data publicly, schools that enjoy greater autonomy in resource allocation tend to show better student performance than those with less autonomy.

At the country level, the greater the number of schools that have the responsibility to define and elaborate their curricula and assessments, the better the performance of the entire school system, even after accounting for national income. School systems that grant schools greater discretion in deciding student-assessment policies, the courses offered, the content of those courses, and the textbooks used are also those systems that show higher reading scores overall. This association is observed even though having the responsibility to design curricula is not always related to better performance for an individual school.

U.S. Schools Are Still Ahead -- Way Ahead

By Vivek Wadhwa

Business Week

updated 1/13/2011 7:00:00 PM ET

The independence and social skills American children develop give them a huge advantage when they join the workforce. They learn to experiment, challenge norms, and take risks. They can think for themselves, and they can innovate. This is why America remains the world leader in innovation; why Chinese and Indians invest their life savings to send their children to expensive U.S. schools when they can. India and China are changing, and as the next generations of students become like American ones, they too are beginning to innovate. So far, their education systems have held them back.

What We Really Need to Fear about China?

By Vivek Wadhwa

Washington Post

China's real advantage lies in its next generation — the students who graduate from its top colleges and become entrepreneurs. These kids are very similar to their counterparts in the West. They are smart, motivated, and ambitious. ... They don't hesitate to think outside the box, to take risks, or to have ambition. Unlike their parents, this new generation can innovate.

Today, Indian engineers make \$7,500 a year against \$45,000 for an American engineer with the same qualifications. If we succeed in matching the very high levels of mastery of mathematics and science of these Indian engineers — an enormous challenge for this country — **why would the world's employers pay us more than they have to pay the Indians to do their work?** They would be willing to do that only if we could offer something that the Chinese and Indians, and others, cannot.
